PROFILE

Dynamic Fullstack Developer with 6 years of extensive experience in crafting user-centric applications and robust web solutions. Expertise in PHP (Laravel), React, and Typescript drives a dedication to delivering high-quality software that elevates user experience across diverse platforms. Proven leadership in managing technology teams and executing complex projects using Agile methodologies ensures timely and effective delivery. Passionate about harnessing innovative technologies to address real-world challenges and enhance operational efficiency. Committed to contributing technical expertise and a collaborative spirit to achieve success in a Full Stack Developer role.

EMPLOYMENT HISTORY

Fullstack Developer at Nor267, Porto

Feb 2024 — Sep 2024

At Nor267 I was responsible for creating and maintaining multiple websites written in PHP (some in Laravel/Symfony and others in pure PHP) and ReactJS, VueJS or jQuery as the frontend technology, creating newsletters and managing web servers. I've also created a website using NextJS/NodeJS and Laravel for a group of restaurants. At Nor267 I improved both my frontend skills (the websites had a huge complexity in the frontend) and my PHP (Laravel) skills, building fully-customizable backoffices and a CMS using the TALL stack (Tailwind, AlpineJS, Laravel and Livewire). I've also had experience with InertiaJS, which connected Laravel and VueJS/ReactJS with ease.

CTO at Avogg (Side Project), VILA NOVA DE GAIA

Jan 2021 — Present

Founded in 2021, Avogg aims to create efficient software to improve the lives of people and entrepreneurs around the world, while maintaining an affordable price.

With quality always guaranteed, we create everything from simple presentation websites for companies or organizations to complex mobile/desktop applications that involve valuable data.

Although we are a young company the Avogg team strives to promote a premium user experience that makes users want to recommend us to their colleagues.

At Avogg I am responsible for leading the technology team in a series of projects for a wide range of sectors. I use Agile principles to lead the team and also worked on the code, using React, PHP (Laravel), jQuery, AlpineJS and Flutter (both for mobile and desktop applications).

PHP/Flutter Developer at Edge Portugal, Porto

Sep 2022 — Apr 2023

As a mobile developer, I had the opportunity to work on a Flutter application that allowed users to set loans through a simulator. The project entailed a lot of debugging and fixing of old bugs that had been plaguing the application for some time.

My role was to ensure that the application was running smoothly and that the simulator was accurately reflecting the loan settings of the user. Despite the challenges I faced, I was able to successfully debug the application and fix all the old bugs. I spent a considerable amount of time testing and making sure that the simulator was running smoothly. This

was important, as it would ensure that users could interact with the application without any issues. In addition to fixing the bugs, I also implemented some minor improvements to the user interface.

These changes were aimed at enhancing the user experience and making it easier for users to navigate through the application. I was pleased with the outcome of my work, and I believe that the changes made a significant impact on the usability of the application.

As a web developer, I've developed a sports club management system that included a special feature called "Talks". This feature allowed coaches to create questionnaires for teams and individual athletes to answer, with the ability to later respond to the athlete's answers. The system was built using an MVC framework in PHP, ensuring efficiency and scalability. This feature was well received by the coaches and athletes using the system. It provided an easy and effective way to communicate and gather information, ultimately improving team performance. Additionally, the use of an MVC framework in PHP allowed for streamlined development and maintenance of the system.

Developer Consultant at Alter Solutions (Natixis), Porto

Apr 2022 — Sep 2022

- Led infrastructure and server projects, focusing on PHP development.
- Developed a planning web application for managing team sprints and vacations using React, Vue, and Laravel.
- Enhanced user experience through a comprehensive interface for logging sprint details, objectives, and progress.
- Collaborated with cross-functional teams to ensure alignment on project requirements and timelines.
- Implemented Agile methodologies to streamline project delivery and improve operational efficiency.

Tech Lead & Full Stack Developer at Bizview, Maia

Oct 2019 — Feb 2022

I worked on Bizview as a web and mobile developer. There, I worked with teams of 2 people on several projects, such as:

- A mobile (Flutter) and web app (NextJS/NodeJs and Laravel) where students could send their work to their teachers, and teachers could evaluate their work.
- A mobile application (Flutter) for a clinic, where patients could schedule a medical appointment and see their checking account. The backend was developed in Laravel as a middleware between the mobile application and the clinic's Api.
- Some small fixes on legacy websites in Laravel.

In all of the projects I was assigned to I had to setup the VPS where the project would be hosted.

EDUCATION

Philosophy, University of Porto, Porto

Sep 2023 — Present

Level 4 - Informatic and multimedia technologies, Colégio de Gaia, Porto

Sep 2019 — Jul 2021

Graduated with 19/20 values.

INTERNSHIPS
